## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 11 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Nagahara.

Nagahara teaches an image forming lens formed of only two lens elements comprising a first lens of negative refractive power with a convex surface on the object side and a concave surface on the image side thereof (column 2, lines 22-27), a stop, a second lens of positive refractive power with a convex surface on the image side thereof (column 2, lines 22-27) respectively from the object to the image side (Figure 1), wherein both the image side and the object side of the first and second lenses are aspheric (Table 3) as claimed in independent claim 11 and dependent claim 12.

### ***Allowable Subject Matter***

Claims 1-10 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Although the prior art teaches an image forming lens system having two lens elements having a positive refractive power and a negative refractive power respectively from the object side to the image side, wherein the first lens element has a convex surface on its object side and a concave

surface on its image side and the second lens element has a convex surface on its image side, further having both the image and object side surfaces of the first and second lens as aspheric surfaces, the prior art fails to teach such a lens system wherein the conditional restraints as taught in independent claim 1 are met.
